

SquidDogs Studios

Whitepaper Version 1.0

What Is SquidDogs?

SquidDogs is a DeFi gaming studio with a mission to produce high-quality play-to-earn games. Unlike many players in the GameFi space, SquidDogs' focus is on delivering value-driven products that build a lasting and engaged community.

What is GameFi?

GameFi is the next stage of evolution in the world of online gaming and combines aspects of DeFi, NFTs, and blockchain ledger technology into a single experience.

The most defining feature of the GameFi phenomenon is its play-to-earn (P2E) aspect, which gives players ownership of all digital resources and assets they obtain while gaming. These assets can then be traded and sold for stable coins and other digital assets, providing a mechanism through which users can earn an income just by playing the game.

Because of this decentralized ownership model, P2E games have the potential to generate significantly more value than what's currently available in the realm of traditional online gaming. What's more, GameFi is quickly becoming one of the most tangible aspects of the Web 3.0 ecosystem.

Why SquidDogs?

In August of 2021, the popular P2E platform Axie Infinity demonstrated the economic viability of GameFi by generating over 120,500 Ether in revenue. In hopes of taking advantage of this emerging trend, the market became flooded with new P2E games.

While some of these games were able to generate impressive gains for early investors, most were designed to capitalize on hype with no intention of building value-driven P2E products.

This is where SquidDogs is different.

SquidDogs is dedicated to delivering quality blockchain-backed games that follow a Fun First philosophy.

The studio has also positioned itself as a SaaS provider by giving other DeFi organizations access to its game design and development resources for a price.

Not only do these strategic partnerships provide the studio with an alternative revenue stream, but they help increase the reach of the SquidDogs platform by tapping into already assembled DeFi communities.

At the time of writing, SquidDogs has one game in post-development and several other ongoing projects in development.

Projects – SquidDogs Arcade

The bread and butter of the studio will be its immersive and diverse arcade. Whether it's snackable mini-game style games, full blown beat-em-up adventures, or SquidDogs inspired versions of classics, the arcade aims to be a revolution of fun first blockchain gaming that will include a game for any type of gamer, while creating new types entirely. Future partnerships will

also have the opportunity to integrate their token mascots and native tokens into the arcade, bringing the crypto community together with gaming and sustainability.

Honkler's Revenge - Beta

Honkler's Revenge, the first installment of the arcade, is a classic beat 'em up-style action game. The game follows Agent Honkler and his squad meme-team-six, as they battle the evil Lord Cybog and his legion of MK-Ultra'd normies and minions.

The game features P2E mechanics, rewarding players points for every minion they defeat. With each wave of minions they defeat, the subsequent waves grow larger and larger. Honkler's Revenge already supports several SquidDogs-affiliated projects, allowing holders of these tokens to earn in their native token.

Tops scores are recorded on a leaderboard, with head-to-head gameplay being a development focus in the near future.

SquidDogs Casino – In Development

In an effort to bring provably fair gaming to the masses, SquidDog studios is developing its very own crypto casino, which rewards not only holders for holding, but players for playing.

Along with classic casino games like Poker, Blackjack, and slots, the platform will include a VIP section and use the studio's native token for all in-game transactions.

\$\$SQDDOGS Token

\$\$SQDDOGS is the native token of the SquidDogs Studio ecosystem. The ERC-20 token will serve as the in-game currency for all SquidDogs products and provide holders with exclusive benefits.

In the future, the studio plans to give large stakeholders of \$\$SQDDOGS access to API and development tools.

Tokenomics

Ticker: \$SQDDOGS

Contract Address: 0x05932d6a006b7d5c7ee3123b074febbae841df2b

Total Supply: 800 quintillion

Liquidity Lock: 6 Months - 1 year

Transaction Fee: 10% (1% redistribution, 1% liquidity, 8% tax)

1% Redistribution

The 1% redistribution provides investors with an incentive to hold \$SQDDOGS, even if they don't interact with the SquidDogs Studios ecosystem. This redistribution feature also offers holders - big and small - access to passive income.

1% Liquidity

1% from each transaction is automatically deposited into the liquidity pool (LP). Not only does this ensure there's always sufficient liquidity to process transactions, but a healthy LP can help protect \$SQDDOGS from massive price swings caused by small buy/sell orders.

8% Development Tax - 0x0d51d9b9f87f822414f1059dd310be83e545a8aa

8% Development Tax offsets early costs with running and maintaining the platform until all aspects have been implemented. At which point taxes can be looked at from a community standpoint.

Why Ethereum?

Whether it be Dapps, DEXs, or NFT market places, Ethereum is still the most widely used smart contract network in operation and the ecosystem facilitates well over 1 million DeFi transactions per day.

While its main competition, Binance Smart Chain, does have lower transaction speeds, the network is significantly less centralized, which goes against many of the core principles of SquidDogs.

Moreover, the team believes that the release of Ethereum 2.0 and its introduction of Shard Chains will solve many of the current scalability issues.

Potential investors who want to participate in the SquidDogs ecosystem but can't afford the gas fees will be able to join in on the fun using one of SquidDogs' DeFi partners, and future free to play arcade options in order to better onboard gamers into the crypto space

Leadership & Team

Brandon Logan (Wut) - Lead Dev

Wut holds a bachelor's degree in programming and game design, a field he worked in for over 8 years. Before starting SquidGames studio, Wut served as the lead solidity dev for Koromaru Inu and was one of the founding developers of Capitol (CPTL).

Chad Pfister (Chad Honkler) – Art Director & Game Designer

Before joining SquidDogs, Chad worked as a senior production artist for mobile game studios and has provided art for popular titles like Family Guy: The Quest for Stuff, Shop Heroes 2, and Miscrits: World of Adventure/Miscrits: Volcano Island. Chad also has over 6 years of experience investing in cryptocurrency and has held development responsibilities on several other DeFi related projects. Mr. Pfister also has a bachelors degree in game design.

Jacob Rogers (Jacob) – Marketing & Sales Lead

Jacob brings over 10 years of marketing, sales, and crypto experience to the project. Before joining SquidDogs, Jacob was part of the HOGE dev team where he helped grow the token pver 100x.

Anthony Audette (7th7andwhich/AJ) - Unity Developer & Systems Analyst

AJ's background is in systems analysis, a topic he studied at BCIT. Before SquidDogs, A.J worked in game design and development, assuming roles that ranged from operations to unity developer. He's also well-versed in Agile, and has extensive experience operating as a SCRUM master.

Stefan Negruti (Jteff/Glyph) – Lead Audio Engineer

Nick – Senior Engineer & Designer

Lemon Sprinkles – Senior Lead Data Analyst

Specializing in synergy, Sprinkles helps to unpack the quick win, with startup needs as well as sustainability in mind. Always minding the pain points, he delivers a positive customer journey using holistic yet logistical methods, with an emphasis on the mantra "content is king."

Ryan (Funzo) – Lead 3D Designer
